

Attack3 - Plugin

Changes in Version 3.0.1

- New factory kit "ZMIX SDSV" by Chuck Zwicky
- The name of the currently selected Sound is displayed below the Kit name
- Samples can be frequency-modulated (FM)
- Added automation of selection parameters like on/off buttons, oscillator or filter types etc.
- MIDI Maps are now automatically saved with the DAW project. However, it's still a good idea to save them separately as they then can be used in saved kits as well.
- Loading single Sounds keeps Bus setting and Solo status in Mixer
- Shift+Scroll Wheel allows for finer adjustments on continuous controls
- Scroll Wheel can be used on selection popups such as Oscillator Shape to select entries
- Flanger mix polarity now follows feedback polarity resulting in much nicer flanging
- Loaded samples are selected and shown in the respective sample browser (note that you need to switch to Preset or User manually to show the right browser view)
- Fixed possible silence when previewing samples
- Fixed crash in Reaper on Windows
- Fixed bug in Comb Minus filter type
- Fixed modulation of envelope attack rates by an LFO when the attack rate is at its minimum
- XOR and Single mode voice allocation now click-free
- Further bug fixes and improvements

Changes in Version 3

- Freely scalable user interface
- MIDI Learn functionality with adjustable minimum/maximum range
- Compressor, Equalizer and 1 selectable Effect per Sound
- Compressor, Equalizer and 3 selectable Effects per Bus
- Freely selectable Samples
- Each Oscillator allows to select up to 4 Samples for Round Robin or Velocity Switching
- New Filter Types including 24 dB types, Comb and Sample Rate Reduction
- New Drive Types in Voice Filter Drive including Clip, Transistor, Diode, Crunch, Pickup and Overdrive
- 2 LFOs with tempo sync, delay, fade and start phase
- Classic and Modern Envelope with modulatable rates and levels
- Up to 3 Modulations per synthesis module
- Integrated Browsers for Kits, Sounds, Samples and MIDI Mappings
