The unique and powerful sound for your DAW!

The power of Blofeld

The sound generation of the Blofeld plugin delivers the typical fat and rich Waldorf sound character that so many Waldorf users worldwide love when they are playing their Q, Q+, Microwave, Microwave II/XT or even the flagship, the Wave. The secret of its sound is a powerful wavetable engine that enables these intense and expressive sounds.

This unique synthesis system is based on the revolutionary PPG synthesizers of the early 80s. When you hear the Blofeld for the first time, you'll immediately remember those edgy, assertive or bell-like timbres that have been an integral part of countless worldwide hits since the PPG era.

The 'Synth' section contains all the important parameters for the sound design, giving access to the oscillators, wavetables, filters, envelopes, LFOs and effects. The modulation matrix offers 16 freely assignable connections in addition to 9 fixed predefined routings. Additionally 4 freely assignable 'modifiers' are available that enable mathematical operations which can be used as a modulation source.

The Blofeld plug-in has a powerful preset browser with a database structure and is offering extensive sorting and filter functions.

The arpeggiator of the Blofeld is one of the most powerful ones to be found in a Waldorf synthesizer. In addition to 15 basic patterns, it offers a complex pattern editor for creating own variations. This feature makes it a powerful tool.
